

## GAS PRESSURE REGULATOR STATION

PGME designs and produces complete gas pressure regulator station to reduce gas pressure at the end of high pressure pipelines in order to distribute it on low pressure networks. Filtration, heating and metering systems are designed by PGME according to the needs for urban or industrial gas networks.

PGME produces complete «turn-key» skids including gas pressure regulator station, and also any device necessary for exploitation.

PGME analyses your need for installation on site, including civil engineering and covering building in order to propose an overall project.
